PROFESSIONAL SUMMARY

Reliability-focused Backend Engineer with **2+ years** designing fault-tolerant **distributed systems** handling **76M+ daily communications** with **99.9% uptime SLA**. Architected multi-tenant **CRM platform** processing **400K RPM**, reducing operational costs by **INR 40–60L/month** through optimized event sourcing and state management. Expert in building **resilient infrastructure** with **Apache Kafka**, **RocksDB**, circuit breakers, and failover strategies. Proficient in **Java**, **GoLang**, **Spring Boot**, **PostgreSQL**, **MySQL**, **Redis**, **Kubernetes**, **Prometheus**, and **Grafana**. Strong track record documenting architecture decisions and managing cross-functional incident response. Solved **800+ DSA problems** with **5-star badges** (LeetCode/CodeChef); completed UIUC CS Fundamentals and Imperial College Math for ML.

EXPERIENCE

Software Development Engineer 1 (SDE 1)

July 2024 – Present

Groww – Engagement & Communications Platform

Bengaluru, India

- **Architected CRM platform** serving **10+ tenant applications** using **Java**, **Spring Boot**, **Scala**, **Spark**, processing **76M+ daily events** with **Kafka**-based event sourcing and **RocksDB** for local state, reducing operational costs by **INR 40–60L/month**.
- Owned scalable **journey analytics platform** using **Apache Spark**, enabling real-time marketing segmentation across **100+ campaigns**; optimized query performance, reducing **p95 latency by 33%** and improving end-user experience for marketing teams.
- Engineered real-time financial streaming pipelines for **F&O data** using **Kafka** and **Spark** across **5,000+ instruments**; achieved sub-**100ms** end-to-end latency, partnering with trading teams to ensure reliable data feeds for **16M+ daily downstream communications**.
- Drove WhatsApp vendor integration and messaging microservices handling **400K RPM**; implemented **circuit breaker** patterns and failover strategies, maintaining **99.9% SLA** across **0.56M+ messages/day** and led **incident response** reviews to improve reliability.
- Spearheaded **zero-downtime service migrations** across clusters — designed dual-write strategy leveraging read replicas, paused writes for only **5-7 minutes**, and led cross-functional team to recreate data pipelines, decoupling platform from cluster-specific infrastructure.
- Designed **multi-tenant microservices architecture** enforcing strict resource isolation and failover mechanisms across **4 applications**; documented incident response runbooks and operational procedures to standardize **team practices** and improve **system reliability**.
- Led **CI/CD infrastructure migration** to **Argo CD** and **Kubernetes**, automating deployment workflows across **8+ services**; instrumented critical services with **Prometheus** and **Grafana**, reducing mean time to detection (**MTTD**) for production incidents by **30%** and improving **SLA** compliance.

Software Development Engineer Intern

January 2024 – June 2024

Groww – Engagement & Communications Platform

Bengaluru, India

- Designed **MessageBoard service** with tenant-aware routing and failover logic, maintaining **SLA** compliance; validated system resilience under production load and documented runbooks for operational team.
- Implemented resilience patterns with exponential backoff for CDP API calls, achieving sub-second failover during vendor outages; communicated design decisions to platform oncall and reduced cascading failure incidents by **100%**.

EDUCATION

Indian Institute of Information Technology, Nagpur

Nagpur, India

Bachelor of Technology in Electronics and Communication Engineering; CGPA: 8.44/10 *November 2020 – July 2024*

PROJECTS

Cash-flow Management Application

(Node.js, Express, React, MongoDB, JWT)

Github – Live

- * Built full-stack financial management tool using **MERN stack**; implemented secure **JWT** authentication and optimized **MongoDB** aggregation pipelines for complex data queries, demonstrating end-to-end system design.

TECHNICAL SKILLS

Languages: Java, GoLang, Python, Scala, SQL

Databases: PostgreSQL, MySQL, Redis, RocksDB, MongoDB

Streaming/Event Processing: Apache Kafka, Apache Spark

Infrastructure & Reliability: Kubernetes, Docker, Argo CD, Prometheus, Grafana, Monitoring, High Availability

Architecture Patterns: Distributed Systems, Microservices, Event Sourcing, Circuit Breaker, Failover Strategies
